

Animal Care Curriculum Snapshot
Learn about the health and welfare of animals

Animal Care Careers

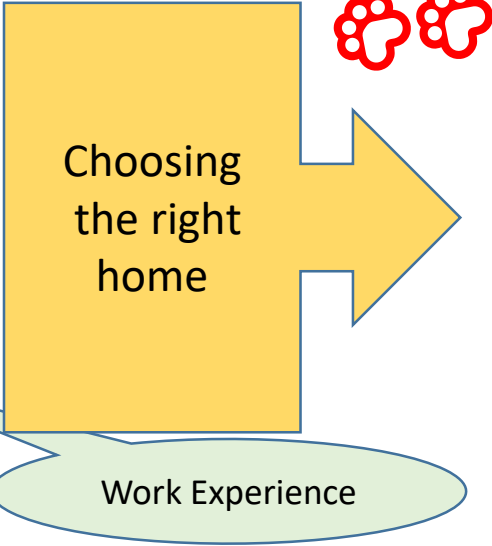

Unit 4!
 Final 25%
 Evidence for assignments can be vlogs, pictures and written accounts.

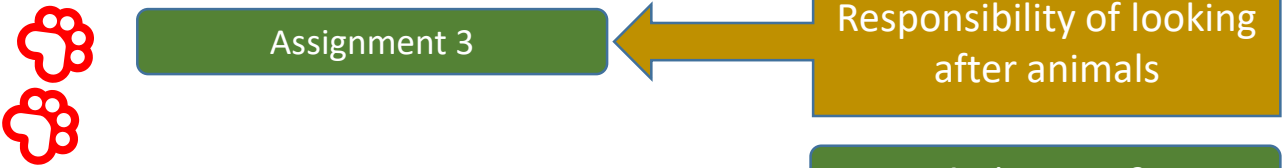

4. Animal Housing Coursework = 25%

This part of the course involves hands-on animal care i.e. cleaning and maintenance of facilities i.e. stables, kennels, hutches etc.

This may be demonstrated in class visits, personal access i.e. visits to stables, farms etc. or work experience. Again this can be evidenced with vlogs, written accounts, pictures and observations from tutors.

Unit 3! One more to go! 😊

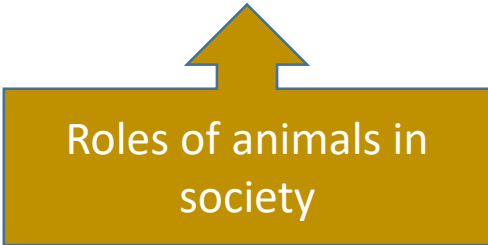

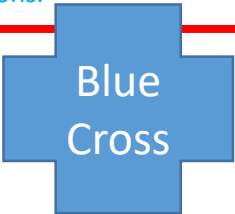

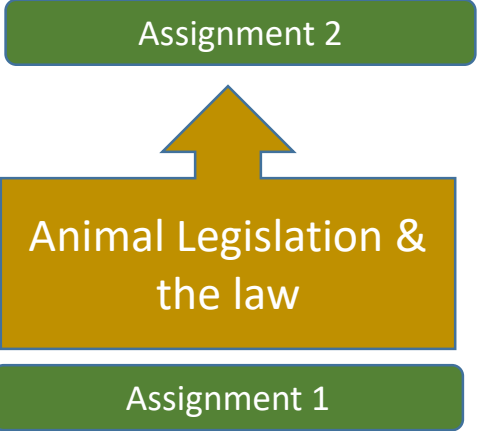

3. Animal Welfare Unit = 25%

Following on from both animal health and animal handling, this unit teaches us all about animal welfare organisations and how they work to maintain the health and well being of animals.

We will learn about the difference between codes of practice, legislation and the law and how they protect animals from cruelty.

This is interesting for anyone wanting to go into work with the RSPCA or similar organisations.

Year 11

Assignment 2

Unit 2!
Another 25%
Evidence for assignment 2 can be vlogs, pictures and written accounts.

Animal Handling – visits, in-school, work experience

Assignment 1

Collect evidence handling your own pet!

Reasons for handling animals

Risk Assessments and PPE

If the test is passed – great! 😊
If not – you can have a second attempt in June.

2. Animal Handling Coursework = 25%
This part of the course involves hands-on animal handling. This may be external visitors coming into the school or trips out to various locations including animal shelters, riding centres, farms and pet shops.
Animals specifically studied are dogs, cats, rabbits, goats, chickens & bearded dragons although others may be included. For more experience.

Ectoparasites
Endoparasites

Vaccination Programmes

Microorganisms and common diseases

1. Animal Health Exam Unit = 25%
This fundamental part of the course teaches us what a healthy animal should look like and how to interpret the signs of ill health and stress in a variety of species.
We Also learn how to assess the suitability of the animal for handling should a physical check be needed.
We use microscope skills to identify pathogens and find out about diseases that can be passed to humans too!
